

# Shell LNG

Outlook 2024

# Cautionary note

The companies in which Shell plc directly and indirectly owns investments are separate legal entities. In this LNG Outlook “Shell”, “Shell Group” and “Group” are sometimes used for convenience where references are made to Shell plc and its subsidiaries in general. Likewise, the words “we”, “us” and “our” are also used to refer to Shell plc and its subsidiaries in general or to those who work for them. These terms are also used where no useful purpose is served by identifying the particular entity or entities. “Subsidiaries”, “Shell subsidiaries” and “Shell companies” as used in this LNG Outlook refer to entities over which Shell plc either directly or indirectly has control. Entities and unincorporated arrangements over which Shell has joint control are generally referred to as “joint ventures” and “joint operations”, respectively. “Joint ventures” and “joint operations” are collectively referred to as “joint arrangements”. Entities over which Shell has significant influence but neither control nor joint control are referred to as “associates”. The term “Shell interest” is used for convenience to indicate the direct and/or indirect ownership interest held by Shell in an entity or unincorporated joint arrangement, after exclusion of all third-party interest.

## Forward-Looking Statements

This LNG Outlook contains forward-looking statements (within the meaning of the U.S. Private Securities Litigation Reform Act of 1995) concerning the financial condition, results of operations and businesses of Shell. All statements other than statements of historical fact are, or may be deemed to be, forward-looking statements. Forward-looking statements are statements of future expectations that are based on management’s current expectations and assumptions and involve known and unknown risks and uncertainties that could cause actual results, performance or events to differ materially from those expressed or implied in these statements. Forward-looking statements include, among other things, statements concerning the potential exposure of Shell to market risks and statements expressing management’s expectations, beliefs, estimates, forecasts, projections and assumptions. These forward-looking statements are identified by their use of terms and phrases such as “aim”, “ambition”, “anticipate”, “believe”, “could”, “estimate”, “expect”, “goals”, “intend”, “may”, “milestones”, “objectives”, “outlook”, “plan”, “probably”, “project”, “risks”, “schedule”, “seek”, “should”, “target”, “will” and similar terms and phrases. There are a number of factors that could affect the future operations of Shell and could cause those results to differ materially from those expressed in the forward-looking statements included in this Outlook, including (without limitation): (a) price fluctuations in crude oil and natural gas; (b) changes in demand for Shell’s products; (c) currency fluctuations; (d) drilling and production results; (e) reserves estimates; (f) loss of market share and industry competition; (g) environmental and physical risks; (h) risks associated with the identification of suitable potential acquisition properties and targets, and successful negotiation and completion of such transactions; (i) the risk of doing business in developing countries and countries subject to international sanctions; (j) legislative, judicial, fiscal and regulatory developments including regulatory measures addressing climate change; (k) economic and financial market conditions in various countries and regions; (l) political risks, including the risks of expropriation and renegotiation of the terms of contracts with governmental entities, delays or advancements in the approval of projects and delays in the reimbursement for shared costs; (m) risks associated with the impact of pandemics, such as the COVID-19 (coronavirus) outbreak, regional conflicts, such as Russia’s invasion of Ukraine, and a significant cybersecurity breach; and (n) changes in trading conditions. No assurance is provided that future dividend payments will match or exceed previous dividend payments. All forward-looking statements contained in this LNG Outlook are expressly qualified in their entirety by the cautionary statements contained or referred to in this section. Readers should not place undue reliance on forward-looking statements. Additional risk factors that may affect future results are contained in Shell plc’s Form 20-F for the year ended December 31, 2022 (available at [www.shell.com/investors/news-and-filings/sec-filings.html](http://www.shell.com/investors/news-and-filings/sec-filings.html) and [www.sec.gov](http://www.sec.gov)). These risk factors also expressly qualify all forward-looking statements contained in this Outlook and should be considered by the reader. Each forward-looking statement speaks only as of the date of this Outlook, February 14, 2024. Neither Shell plc nor any of its subsidiaries undertake any obligation to publicly update or revise any forward-looking statement as a result of new information, future events or other information. In light of these risks, results could differ materially from those stated, implied or inferred from the forward-looking statements contained in this LNG Outlook.

## Shell’s net carbon intensity

Also, in this LNG Outlook we may refer to Shell’s “Net Carbon Intensity”, which includes Shell’s carbon emissions from the production of our energy products, our suppliers’ carbon emissions in supplying energy for that production and our customers’ carbon emissions associated with their use of the energy products we sell. Shell only controls its own emissions. The use of the term Shell’s “Net Carbon Intensity” is for convenience only and not intended to suggest these emissions are those of Shell plc or its subsidiaries.

## Shell’s net-Zero Emissions Target

Shell’s operating plan, outlook and budgets are forecasted for a ten-year period and are updated every year. They reflect the current economic environment and what we can reasonably expect to see over the next ten years. Accordingly, they reflect our Scope 1, Scope 2 and Net Carbon Intensity (NCI) targets over the next ten years. However, Shell’s operating plans cannot reflect our 2050 net-zero emissions target and 2035 NCI target, as these targets are currently outside our planning period. In the future, as society moves towards net-zero emissions, we expect Shell’s operating plans to reflect this movement. However, if society is not net zero in 2050, as of today, there would be significant risk that Shell may not meet this target.

Shell expects to publish its 2024 Energy Transition Strategy on March 14, 2024, which will include an update on Shell’s energy transition strategy and set out Shell’s climate targets and ambitions for the future.

## Forward Looking Non-GAAP measures

This LNG Outlook may contain certain forward-looking non-GAAP measures such as [cash capital expenditure] and [divestments]. We are unable to provide a reconciliation of these forward-looking Non-GAAP measures to the most comparable GAAP financial measures because certain information needed to reconcile those Non-GAAP measures to the most comparable GAAP financial measures is dependent on future events some of which are outside the control of Shell, such as oil and gas prices, interest rates and exchange rates. Moreover, estimating such GAAP measures with the required precision necessary to provide a meaningful reconciliation is extremely difficult and could not be accomplished without unreasonable effort. Non-GAAP measures in respect of future periods which cannot be reconciled to the most comparable GAAP financial measure are calculated in a manner which is consistent with the accounting policies applied in Shell plc’s consolidated financial statements.

The contents of websites referred to in this report do not form part of the LNG Outlook 2024.

We may have used certain terms, such as resources, in this LNG Outlook that the United States Securities and Exchange Commission (SEC) strictly prohibits us from including in our filings with the SEC. Investors are urged to consider closely the disclosure in our Form 20-F, File No 1-32575, available on the SEC website [www.sec.gov](http://www.sec.gov).

# Summary

## Industry, heating and emerging Asia to drive LNG demand growth

- Demand for natural gas has peaked in some regions and globally is set to peak after 2040.
- The global LNG market will continue growing into the 2040s, mostly driven by China's industrial decarbonisation and strengthening demand in other Asian countries.

## Gas prices more stable in 2023 but volatility lingered in a tight market

- Global trade in LNG expanded slightly in 2023, with tight supplies constraining growth and prices staying above historic averages.
- A milder winter, high gas storage levels, modest economic recovery in China and lower demand in Europe helped balance the global gas market during 2023.

## Rising global demand for LNG expected to keep pace with new supply

- In the medium term, latent demand for LNG – especially in Asia – is set to consume new supply that is expected to come onto the market in the second half of the 2020s.
- To offset falling domestic gas production in South-east Asia, significant infrastructure investment will be needed to access the LNG that these countries need for their economic development.

Hydrogen & derivatives: methanol, ammonia, hydrogen, biofuel. Other: Ethane, LPG, nuclear. PCC: pure car carriers. Ro-Ro: roll-on/roll-off. Others: dredgers, ferries, multi-purpose, LPG, tugs. LSG: liquefied synthetic gas. Energy efficient technologies include air lubrication, shaft power generation, digital technologies, wind technologies and improved hull coatings. Future Technologies include onboard carbon capture and storage, co-feeding hydrogen combined with dual-fuel LNG engines, fuel cell for main engine.

# LNG decarbonisation pathways need to be explored together

To address emissions today and progress zero emission options

Source: Shell interpretation of UK Department for Environment, Food and Rural Affairs (DEFRA) GHG conversion factors 2022, JEC Well-to-Tank report v5, Wood Mackenzie announcement

# A common goal: reducing methane emissions to 'near zero'

## Driven by government, institutions and policy

**156 countries** now part of **Global Methane Pledge**, covering 86% of LNG importing countries\*

Groundbreaking **methane regulation** for oil and gas, including imports of gas and LNG into the **EU**

**Agreement** of EU, Japan, South Korea, USA and Australia to harmonised MRV

**\$255 mln** mobilised for **World Bank methane and flaring fund**

Source: Oil & Gas Methane Partnership (OGMP), public announcements, Methane Intelligence (MiQ) announcements, \*including EU; \*\* Announcement by Daphne Technologies (SlipPure™)

## Driven by industry

of LNG flows covered by more than **120 companies** and **70 countries** have joined **OGMP 2.0**

Lab tests of new shipping technology shows **methane reduced to low levels\*\***

**52 signatories** to oil and gas decarbonisation charter launched at **COP 28**

## Driven by customers

**First GIIGNL's MRV and GHG Neutral** aligned cargo delivered in Taiwan

**Increasing customer** led demand for **transparency** and **third-party verification**

**Gas prices more stable in 2023  
but volatility lingered in tight  
market**

**2**

**Shell  
LNG**  
Outlook 2024

# Despite structural tightness prices moderated in 2023

JKM prices fell but remained above historical norms

## Global gas trade change (2019 vs 2023)

## 2023 demand factors

- Mild winter temperatures
- High gas & LNG inventories in Europe & Asia
- Strong nuclear generation in France, Japan & South Korea
- Modest Chinese economic recovery
- Weak European demand & energy savings

## Average monthly JKM prices

Source: Shell interpretation of Intercontinental Exchange (ICE) and Wood Mackenzie data  
JKM: Japan Korea Marker  
\*Pipeline exports exclude North America pipeline trade

# Supply security concerns sparked periods of volatility

Global events impacted market even with record-high inventories

## European gas inventories

### Event-driven volatility

- 1 Prolonged Norwegian maintenance
- 2 Australian industrial action concern
- 3 Israel-Hamas conflict

## Dutch TTF traded volume vs price

**Long-term LNG SPA signings**  
MTPA

**Long-term LNG SPAs in effect**  
MTPA

Source: Shell interpretation of Wood Mackenzie and S&P Global Commodity Insights data

## Industry, heating and emerging Asia to drive LNG demand growth

Demand for natural gas has already **peaked** in some regions

China to drive demand for LNG this decade to meet industry needs and decarbonisation goals

LNG continues to lower emissions in the marine sector

LNG-fuelled vessels in operation set to double over the coming years

Continuing policy support for natural gas projects in Asia that deliver environmental and economic benefits

## Gas prices more stable in 2023 but volatility lingered in tight market

Gas and LNG prices stabilised during 2023

But limited new LNG supply has kept gas prices above historic averages

USA became largest LNG exporter in 2023, shipping 86 million tonnes

Chinese gas demand grew 8% despite modest economic recovery

Overtakes Japan to become largest LNG importer again

European gas use fell due to continued elevated prices

LNG continued to play a vital energy security role with Europe importing more than 120 million tonnes

Global trade in LNG reached 404 million tonnes in 2023, an increase of 7 million tonnes compared to 2022

## Latent LNG demand to keep pace with new supply but dependent on regas infrastructure investment

China's gas demand expected to rise by more than 50% by 2040

North America expected to meet ~30% of total global LNG demand. But reliance on four basins could create midstream constraints

Europe will continue to need LNG to meet gas supply needs despite consensus for falling gas demand

Global LNG supply expansion coming this decade but startup timings uncertain

Declining domestic gas and growing power markets set to drive South and South-east Asia LNG imports

Dependent on investment in regasification infrastructure
